

## EXPERIENCE

---

- **Kusho**

Bengaluru, India

*Senior Full Stack Developer*

*Nov 2023 - Present*

- **AI-Powered E2E Testing Platform:** Architected scalable testing platform using React Flow, TypeScript, and LLMs for automated API flow generation and validation. Implemented distributed test orchestration handling 10K+ concurrent flows, with intelligent Chrome instance management reducing memory usage by 70%. Achieved 8x faster scenario creation through AI-driven flow suggestions and parallel execution framework, processing 100K+ API combinations daily.
- **Intelligent Task Processing System:** Architected distributed processing pipeline using Redis, RQ, and LangChain, handling 100K+ daily tasks. Implemented vector search with Pinecone and automated scaling, achieving 45% higher throughput and 60% lower latency while maintaining 99.95% system availability under peak loads.
- **Automated UI Testing Framework:** Engineered end-to-end UI testing solution combining Chrome extension, Playwright, and AI-powered scenario generation. Achieved 3x increase in test coverage and 70% reduction in testing effort, leading to \$50K monthly savings in QA costs and 80% faster release cycles.
- **Universal API Testing Framework:** Developed comprehensive API testing framework supporting REST, GraphQL, and OpenAPI, featuring intelligent validation and custom DSL. Reduced test authoring time by 75% while achieving 90% test coverage across services, enabling seamless CI/CD integration and improving API reliability by 40%.

- **Castler**

Delhi, India

*Senior Full Stack Developer*

*July 2021 - August 2023*

- **Enterprise Payment Processing Platform:** Led development of mission-critical payment infrastructure processing 50Cr+ monthly across UPI/IMPS/NEFT, serving 100K+ daily transactions. Implemented distributed architecture with Redis, achieving 99.99% uptime, 97% success rate, and 35% cost reduction through intelligent load balancing and circuit breakers.
- **Financial Security Infrastructure:** Spearheaded implementation of bank-grade security system with OAuth 2.0, PKCE, and automated vulnerability scanning (OWASP ZAP, SonarQube). Achieved PCI DSS compliance, eliminated critical vulnerabilities, and reduced security review cycles by 50% through custom security toolkit and CI/CD integration.
- **No-Code Financial Workflow Platform:** Architected event-driven financial automation platform using React, TypeScript, and XState, enabling non-technical users to design complex transaction workflows. Achieved 80% user adoption, 60% reduction in workflow creation time, and 40% decrease in configuration errors through intuitive drag-and-drop interface.
- **Large-Scale Database Migration:** Orchestrated critical migration of 200GB+ financial data from MongoDB to MySQL with zero downtime, ensuring RBI compliance and data integrity. Achieved 99.99% data accuracy, 40% faster query performance, and 25% infrastructure cost reduction through optimized schema design and caching strategies.

## SKILLS

---

- **Programming Languages:** : Python, GoLang, Rust, C++, SQL, Java, JavaScript
- **Web Development:** : AngularJS, ReactJS, Node.js, HTML, CSS, JavaScript, TypeScript, Vue, NuxtJs, Next.js
- **Databases:** : MySQL, Postgres, MongoDB
- **Tools and Environments:** : Bash, Git, GitHub, Linux, Terminal, Vim, NeoVim, VS Code, JupyterLab, Docker, Kubernetes
- **Technologies and Frameworks:** : Deep Learning, Mocha, Chai, PyTorch, TensorFlow, NestJS

## EDUCATION

---

- **Amity University**

Lucknow, India

*Bachelor of Technology in Computer Science*

*Aug. 2017 – May 2021*
