

SUMMARY

Senior Software Engineer with 5+ years of experience in distributed systems, real-time data pipelines, and full-stack development. Proficient in Python, TypeScript, Go, and cloud infrastructure (AWS, Docker, Kubernetes). Track record of designing event-driven architectures, microservices, and AI-powered features.

EXPERIENCE

- **WellnessLiving** Bengaluru, India
Senior Software Engineer April 2025 - Present
 - **Real-Time Analytics Platform:** Architected streaming pipeline using Change Data Capture (CDC) and message queues into a columnar store. Built semantic layer standardizing metrics across dashboards, cutting ad-hoc SQL requests 60%. Added RAG-powered chat assistant for metric queries.
 - **Real-Time Chat Infrastructure:** Designed horizontally scalable WebSocket platform with stateless microservices and message queue backplane. Implemented JWT auth, rate limiting, and auto-reconnect with exponential backoff. Reduced connection drops 35% and support tickets 18%.
- **Kusho** Bengaluru, India
Full Stack Developer August 2023 - April 2025
 - **Visual API Testing Platform:** Built React-based drag-and-drop interface for end-to-end API test flows with 50+ node types. Parallelized execution via Web Workers, reducing test runtime 40%. Optimized rendering with virtualization for sub-200ms response on large graphs.
 - **Browser Test Automation Tool:** Developed Chrome extension that records user interactions and generates Playwright test scripts. Implemented robust selectors with fallback strategies for UI changes. Achieved 95% stability, 3x test coverage, and 70% less manual QA.
 - **Multi-Format API Parser and Test Generator:** Built DSL unifying Postman, OpenAPI/Swagger, GraphQL, and Protocol Buffers into one executable model. Integrated LLM APIs to auto-generate test cases from API definitions. Reduced MTTR 25% and test authoring time 68%.
- **Castler** Delhi, India
Full Stack Developer May 2021 - August 2023
 - **Payment Processing Platform:** Built event-driven payment system for UPI/IMPS using message queues, idempotency checks, and circuit breakers. Processed INR 50Cr+ monthly (2M+ transactions) with sub-200ms latency and 35% infra cost reduction.
 - **Security Automation and Compliance:** Integrated OWASP ZAP, SonarQube, Snyk into CI/CD for automated scanning. Implemented OAuth 2.0 with PKCE and JWT auth. Added rate limiting and ELK monitoring. Cut critical vulnerabilities 40% and achieved PCI DSS compliance.
 - **Database Migration:** Led zero-downtime migration of 200GB financial data from MongoDB to MySQL via blue-green deployment and dual-write. Built Airflow reconciliation pipelines. Achieved 99.99% data accuracy, 40% faster queries, and 25% lower infra costs.

SKILLS

- **Languages:** Python, JavaScript/TypeScript, Go, SQL, Java, C++
- **Frontend & Backend:** React.js, Next.js, Vue.js, Angular, Node.js, NestJS, REST APIs, GraphQL, Microservices
- **Data & Infrastructure:** PostgreSQL, MySQL, MongoDB, Redis, Kafka, AWS, Docker, Kubernetes, CI/CD, Terraform
- **AI/ML:** PyTorch, TensorFlow, LLM APIs, RAG, Vector Databases, Prompt Engineering

EDUCATION

- **Amity University** Lucknow, India
Bachelor of Technology in Computer Science Aug. 2017 - May 2021
